

Global Tree Packs Guide

You can change scale of the trees based on your scene scale

1. Select all tree models
2. Change the “Scale Factor” value
3. Press apply

Tree Shaders

First download and import the tree shaders from the below link

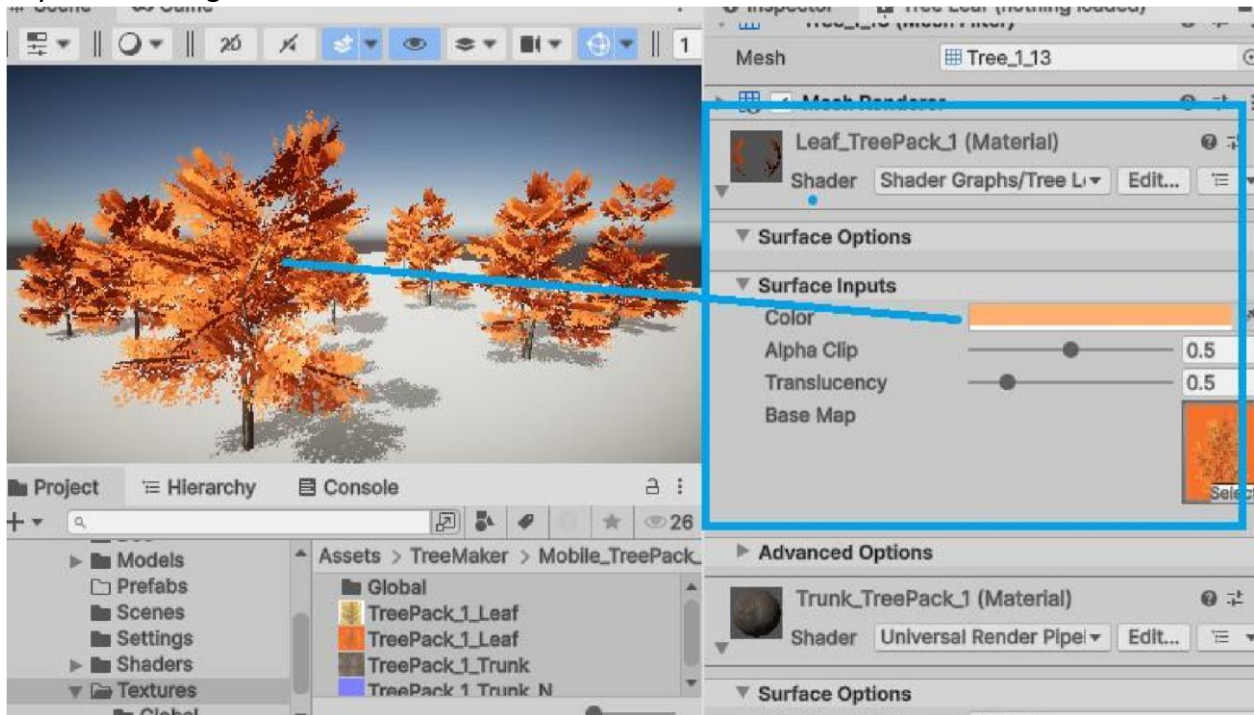

<https://assetstore.unity.com/packages/slug/383576>

Now you can use my translucency tree shaders from the below shader path:

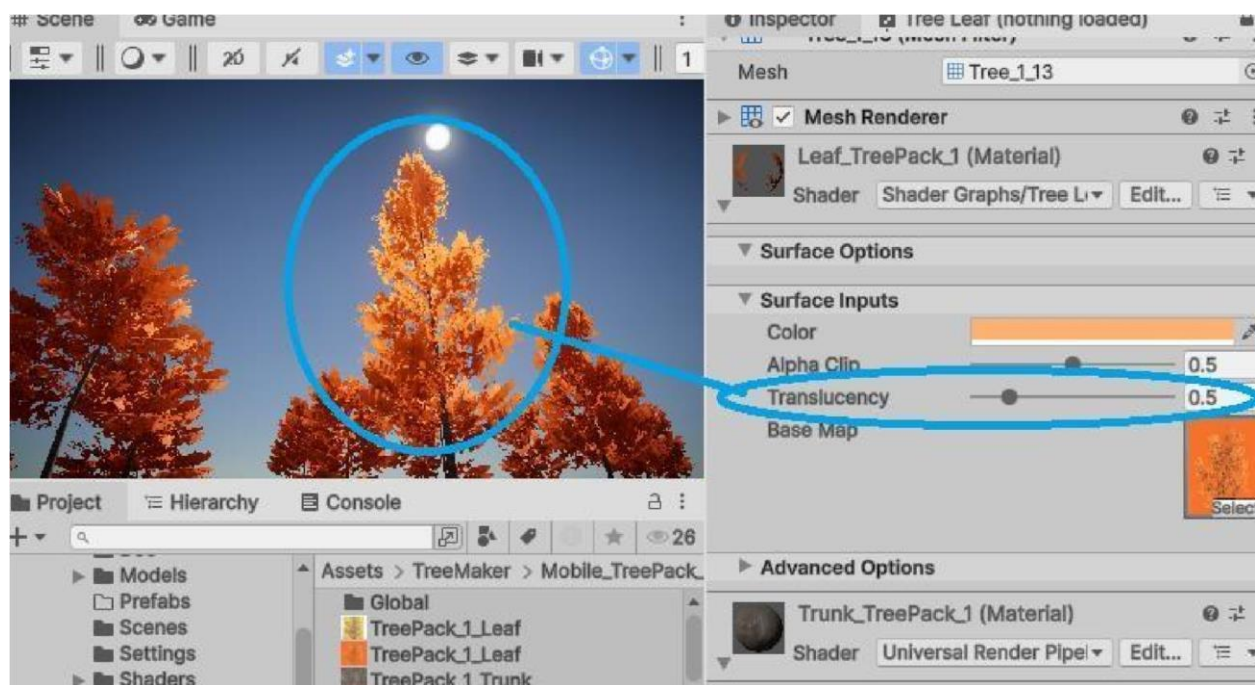

ShaderGraph-> Tree Leaf

ShaderGraph-> Tree Leaf MaskMap

Also you can change the tree leaf's color to get the desired result:

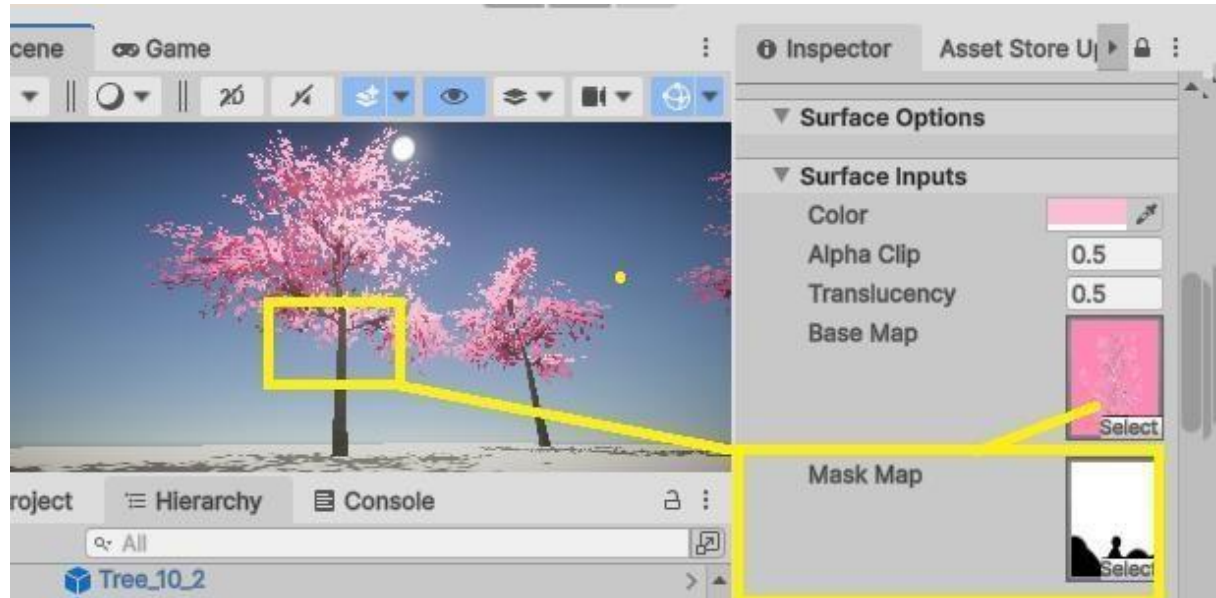

Translucency will be visible when the tree is in the back side of the sun light

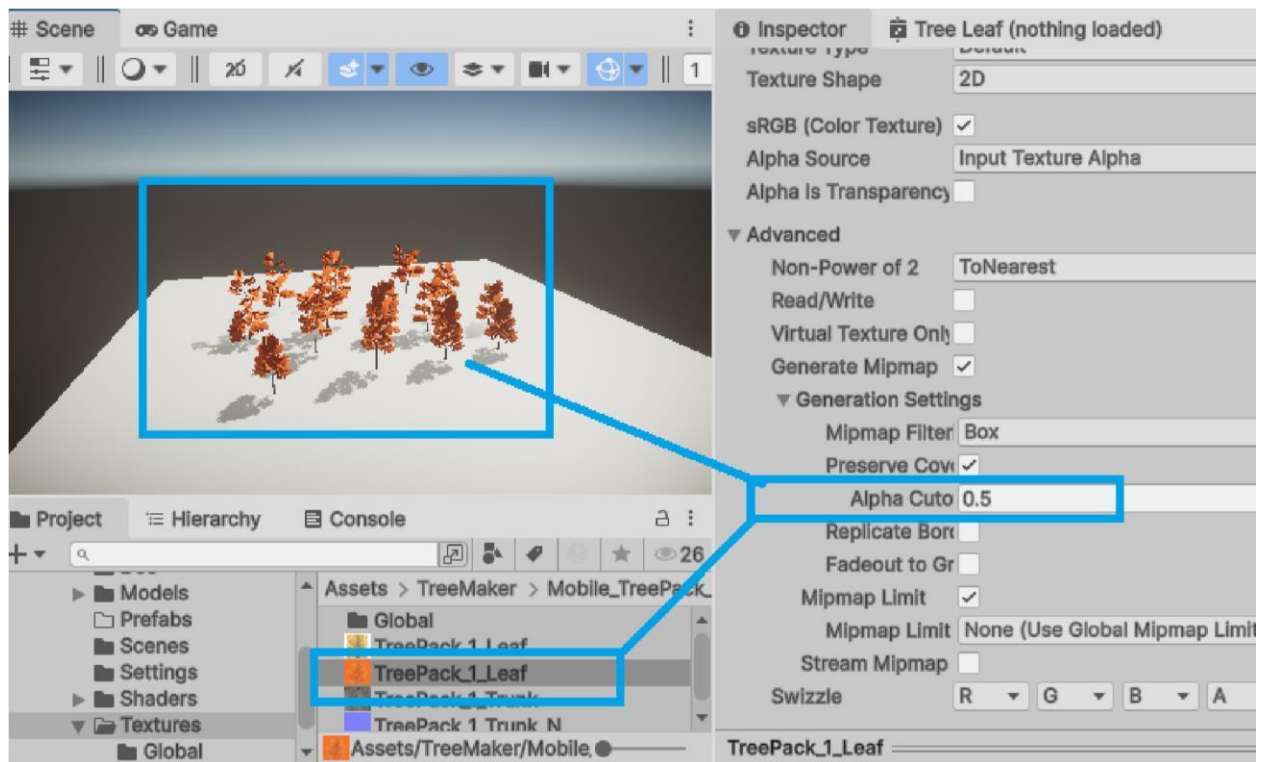

Mask Map:

Sometimes you like to skip some part of the textures to be untouched by translucency and color value. SO you can use MaskMap shader to skip some part of the texture to receive translucency and Color

Mip-Map Alpha Clip

You can change mipmap settings to have your desired alpha value in the far distance:
